

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

Claims 1 to 10. (Cancelled).

11. (New) A method for making available security functions for the transmission of data from and to a subscriber terminal unit of a mobile communications network, comprising:  
carrying out a real-time analysis of the data flow from and to the subscriber terminal unit in a device of a network node of the mobile communications network, the data having contents specified previously by one of a subscriber and a network operator being recognized and processed further; and

carrying out first an authentication method by which the subscriber is authenticated via the device of the network node.

12. (New) The method of claim 11, further comprising recognizing and processing further data traffic from and to specified senders and receivers.

13. (New) The method of claim 11, wherein the recognized data is at least one of selected, isolated, deleted and made available to one of the subscriber and the network operator for further processing.

14. (New) The method of claim 11, wherein a filtering of the IP/TCP-based data traffic is carried out.

15. (New) The method of claim 11, wherein an arising data transfer volume is limited to a measure established by one of the subscriber and the network operator.

16. (New) The method of claim 11, wherein the arising data transfer costs are limited to a measure established by one of the subscriber and the network operator.

17. (New) The method of claim 11, further comprising notifying at least one of the

subscriber and network operator upon the recognition of at least one of certain data content and sender.

18. (New) A device for making available security functions for the transmission of data from and to a subscriber terminal unit of a mobile communications network, including a security and filtering device comprising:

- a filter component for the real-time analysis of the data flow from and to the subscriber terminal unit;

- an authentication component for authenticating the subscriber vis-à-vis the security and filtering device;

- an administrative component as the interface to the subscriber; and

- a database for storing subscriber-specific and network operator-specific data and security and filtering functions.

19. (New) The device of claim 18, wherein the security and filtering component is positioned in one or more network nodes of the mobile communications network.

20. (New) The device of claim 19, wherein special filter components are established for certain data contents.
